

**What was your contribution to the group project and roles you have taken?**

I had the role of the Technical Expert and Developer in the group where I provided specific web development knowledge and expertise to my team. I was responsible for managing technical problems and made sure the website ran smoothly. As a Developer I was in charge of writing code and developing the websites. Apart from coding I was responsible for sending regular updates to the Team Leader.

**What skills have you gained through the project and how you achieved them?**

The main skills I strengthened during this group project was problem-solving; whilst coding I encountered many problems, which I was able to find the source of the problem and was able to develop an effective and efficient solution. Coding has required me to think critically and logically in order to solve complex problems. This skill has enabled me to approach tasks with a clear and organised mindset. Moreover, throughout this project I have gained the ability to think outside the box, both when designing the layout of the websites and when coding. This has allowed me to come up with creative solutions to problems, this has been especially useful when it comes to brainstorming ideas for projects or coming up with new solutions to existing problems. Overall, my role in the group project has provided me with a wide range of skills that I can use in my everyday life. From problem solving to communication, this project has allowed me to become a better thinker, communicator and problem solver.

**What worked well (e.g. ground rules, project plan, roles and responsibilities) and what did not work well?**

Overall, the project went well and we were able to meet our expectations and complete the project on time. The ground rules, project plan, and roles and responsibilities were all effective in helping us stay on track and achieve the desired results. The ground rules were helpful in setting expectations for the team and ensuring that everyone was on the same page; this allowed us to work together in a productive and respectful manner. The project plan was effective in helping the team stay on track and meet deadlines; this included a timeline of when tasks needed to be completed. Everyone was assigned specific tasks and was responsible for completing those tasks in a timely manner. However, there were some areas where the project could have been improved. Communication was one area that could have been improved, as there were times when communication was not as clear as it could have been, which led to some confusion and delays.

**How would you do things differently?**

If I were to do things differently in this group project I would first make sure that everyone was given the opportunity to work together in a collaborative environment. This would involve more face-to-face meetings where everyone could come together to discuss the project and brainstorm ideas. Finally, I would make sure that everyone was given the opportunity to learn from each other. This would involve setting up a system where everyone could share their knowledge and experiences, and learn from each other. This would help to ensure that everyone was on the same page and that everyone was working towards the same goal.
